

\$10,000 BUNKER LOSS

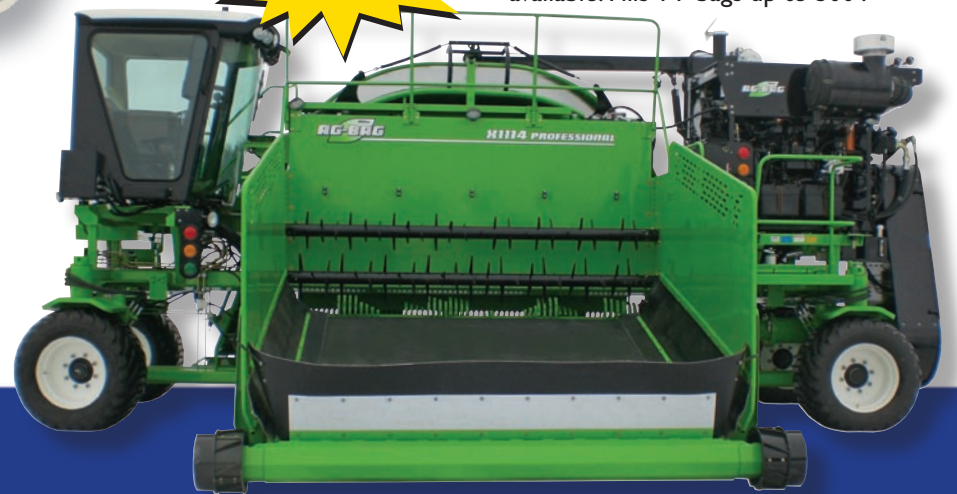

For every 1,000 tons of silage stored

(Calculated at \$50/ton silage value with 20% bunker loss due to spoilage and shrinkage.)

10 reasons to choose the Ag-Bag system...

1. More milk produced.
2. Higher dry matter intake.
3. Higher nutritional value.
4. Significantly less dry matter loss.
5. Segregated feed storage.
Test a new corn silage hybrid. Keep 1st, 2nd and 3rd crop hay separate. Easily adjust rations for dry cows, heifers, etc.
6. Rations are not tainted with spoilage.
7. Unlimited storage capacity.
8. Less need for higher cost supplements.
9. Low rotor position pushes the feed upward into the bag for better packing.
10. Scientifically superior feed, healthier cows, lower storage costs, higher resale value... and more.

There's an Ag-Bag model for every size dairy or livestock operation.

X1114 Professional
Highest capacity silage bagger available. Fills 14' bags up to 500'.
